

Joint Student Branch Technical Visit **Kai Tak District Cooling System (North Plant)**

The Kai Tak development project spans a total area of 320 hectares covering the ex-airport and nearby area. Since the project is huge, the demand of air-conditioning rapidly increases. Thus, the HKSAR government grabs this chance to construct a district cooling system, which is the most energy-efficient HVAC system in this project.

The district cooling system will be the highlight of this event. The participants of this site-visit can know more about the advantages of district cooling in both economic and environmental aspects. Apart from this, the participants can know more about the theory of district cooling.

ASHRAE Student Members are Invited to Join

Date: 18th January, 2020 (Saturday)
